# A Reputation for Excellence

Since 1998, Pinnacle Steel has been providing clients with timely delivery and quality products. What began as a general fabrication business evolved into our specialization in Substation Structural Steel. It's the only fabrication we do and once you've used our services you'll believe we do it better than anyone in the industry. Over the past decade through continuous improvement we have refined our processes making us your single source for substation structural steel.

Pinnacle Steel is fully committed to your complete satisfaction, from design to project completion. Ask about our four-point inspection process and how it will be put to work for you. We'll deliver your project in 4 to 6 weeks. **Guaranteed.**

Our management team is comprised of individuals who know steel, substation structures and welding. Co-founders Terry Beem and Jeff Ladenburger have more than 60 years of combined industry experience and are actively involved in our day-to-day operations. No one fabricates substation steel better than us.

## Experts in Substations Structures

Pinnacle Steel provides outstanding quality and the fastest turnaround time in the industry. This promise is backed by our rigorous four-point inspection process ensuring you get exactly what you need, on time and at a competitive price.

The process begins with careful scrutiny of the individual structures details. From there, we complete a thorough inspection of each assembly after fit up. Next, each assembly's welds are visually inspected and we again verify compliance to the drawings. Finally, we do one last inspection after galvanizing, prior to shipping to ensure overall quality. We label every assembly with a highly visible metal tag for ease of identification in the field. All this guarantees you a smooth installation on site.

Our attention to detail from start to finish is what separates us from the competition. Because substation steel fabrication is our specialty we can identify and correct potential problems before they cost you time and money.

**We provide competitive pricing for even the most sensitive schedules**

**We utilize precision plate CNC burning and drilling**

**Our team of welders are annually tested to AWS D 1.1 certification**

Pinnacle Steel has been involved in over 250 substation projects over the past 4 years. We have built substation station structures ranging from 15kV to 345kV all to the complete satisfaction of some of the largest utilities in the US.

Whether you need a 90' Static mast or a 42' A-frame Dead End structure, a single post insulator mount or a complete 345kV switch yard Pinnacle Steel is .....
