A Reputation for Excellence

Since 1998, Pinnacle Steel has been providing clients with quality products and on time delivery. What began as a general fabrication business evolved into our specialization in Substation Structural Steel. It's the only fabrication we do, and once you've used our services you will be convinced we do it better than anyone in the industry.

Pinnacle Steel is fully committed to your complete satisfaction, from initial design to project completion. Over the past decade through continuous improvement we have refined our processes making us your single source for fabricated substation structural steel. Ask about our four-point inspection and quality assurance processes and how they will be put to work for you.

We will deliver your project in 4 to 6 weeks. **Guaranteed.**

Our management team is comprised of individuals who know substation structure fabrication and welding. Co-founders Terry Beem and Jeff Ladenburger have more than 70 years of combined industry experience and are actively involved in our day-to-day operations.

No one fabricates substation structures better than us. **Guaranteed.**

Experts in Substation Structure Fabrication

Pinnacle Steel provides documented, exceptional quality and the shortest lead times in the industry. Our attention to detail from start to finish is what separates us from the competition. Because substation steel fabrication is our specialty we can identify and correct potential problems before they cost you time and money. This promise is backed by our rigorous four-point inspection and quality assurance processes ensuring you not only get exactly what you ask for but what you need, on time and at a competitive price. **Guaranteed.**

The process begins with careful scrutiny of the individual structure's details. From there, we complete a thorough inspection of each assembly after fit up. Next, each assembly's welds are visually inspected and we, again, verify compliance to the drawings. Finally, we do one last inspection after galvanizing, prior to shipping, to ensure overall quality. We utilize precision plate CNC burning and drilling and label every assembly with a highly visible metal tag for ease of identification in the field. All this guarantees you a smooth installation on site. **Guaranteed.**

Our team of welders have an average of 10+ years' experience fabricating substation structures at Pinnacle Steel and are annually tested to AWS D 1.1 certification

Pinnacle Steel has been involved in over 300 substation projects over the past 4 years. We have built substation structures ranging from 15kV to 345kV; all to the complete satisfaction of some of the largest utilities in the United States & Canada.

Whether you need a 90' Static Mast or a 42' A-frame Dead End structure, a single post insulator mount or a complete 345kV switch yard, Pinnacle Steel is

Your Single Source for Substation Structural Steel Fabrication Guaranteed
